

Top 10 Accessibility Issues:

It's the right thing to do

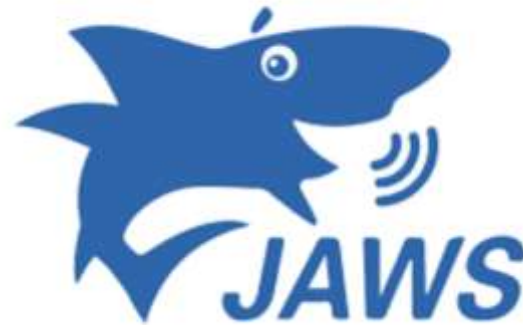

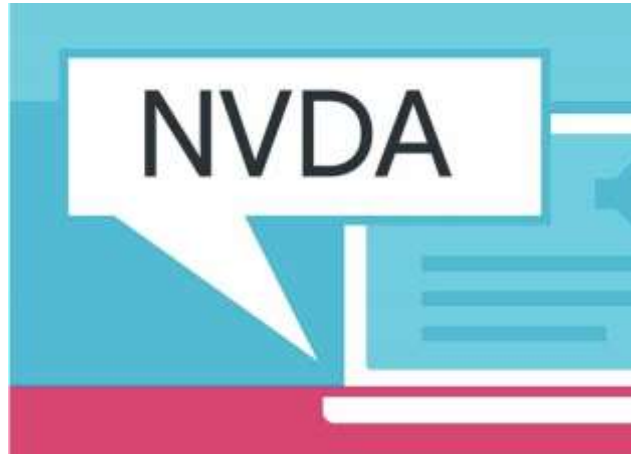

Choose the right CMS:

1. Pick a CMS that creates accessible templates.
2. Pick a CMS that can show you where the issues are (all of them).
3. The CMS should be able to help you with your content not just the template.

Choose the right Web Governance tool:

1. Pick a tool that is easy to use.
2. Pick the tool that shows you the most issues.
3. Pick a tool with top customer support.
4. Pick a tool that can help you with your entire website.
5. Pick a tool that fits in your budget.

Alternate Text for Images:

Rationale

All images must have alternate text. It's required by people that are unable to view the image.

How To Repair

Add an `alt` attribute to your `img` element.

Repair Example

```

```

Steps To Check

Procedure

1. Check each `img` element for the presence of an `alt` attribute.

Expected Result

1. All `img` elements have an `alt` attribute.

Failed Result

1. Add an `alt` attribute to each `img` element.

Examples

```
<p></p>
```

```
<p></p>
```

Correct Color Contrast:

Short Description

The visual presentation of text must have a contrast ratio of at least 4.5:1, except for large-scale text, which must have a contrast ratio of at least 3:1 as determined by a contrast algorithm specified by WCAG2.0. Large scale text is considered to be at least 18-point (or 14 point when bold).

Rationale

The rationale is based on a) adoption of the 3:1 contrast ratio for minimum acceptable contrast for normal observers, in the ANSI standard, and b) the empirical finding that in the population, visual acuity of 20/40 is associated with a contrast sensitivity loss of roughly 1.5 [ARDITI-FAYE]. A user with 20/40 would thus require a contrast ratio of $3 * 1.5 = 4.5$ to 1. Following analogous empirical findings and the same logic, the user with 20/80 visual acuity would require contrast of about 7:1.

How To Repair

Use a colour contrast evaluator to determine if text and background colours provide a contrast ratio of 4.5:1 for standard text, or 3:1 for larger text. Change colour codes to produce sufficient contrast.

Examples with light background [edit]

Text Color	Background color	Sample	Code	Contrast ratio	WCAG 2.0 conf.
 #000000	 #FFFFFF	Sample	{{Color contrast ratio #000000 #FFFFFF}}	21	AAA
 #000080	 #DDDDDD	Sample	{{Color contrast ratio #000080 #DDDDDD}}	11.787	AAA
 #7B0000	 #FF9900	Sample	{{Color contrast ratio #7B0000 #FF9900}}	5.324	AA
 #004800	 #AAAAAA	Sample	{{Color contrast ratio #004800 #AAAAAA}}	4.691	AA
 red	 white	Sample	{{Color contrast ratio red white}}	3.998	No
 #FF0000	 #FF9999	Sample	{{Color contrast ratio #FF0000 #FF9999}}	1.955	No

Examples with dark background [edit]

Text Color	Background color	Sample	Code	Contrast ratio	WCAG 2.0 conf.
 #BADFEE	 black	Sample	{{Color contrast ratio #BaDfEe B AcK}}	14.878	AAA
 red	 black	Sample	{{Color contrast ratio red black}}	5.252	AA
 #FFFF00	 #00FFFF	Sample	{{Color contrast ratio #FFFF00 #00FFFF}}	1.168	No

Header Tags:

1. Setup following header tags.
2. Make sure the Tag follows the h1,h2,h3 format.

<h1> Main Heading </h1>

Each source anchor contains text.

Short Description

a (anchor) element must contain text. The text may occur in the anchor text or in the **title** attribute of the anchor or in the Alt text of an image used within the anchor.

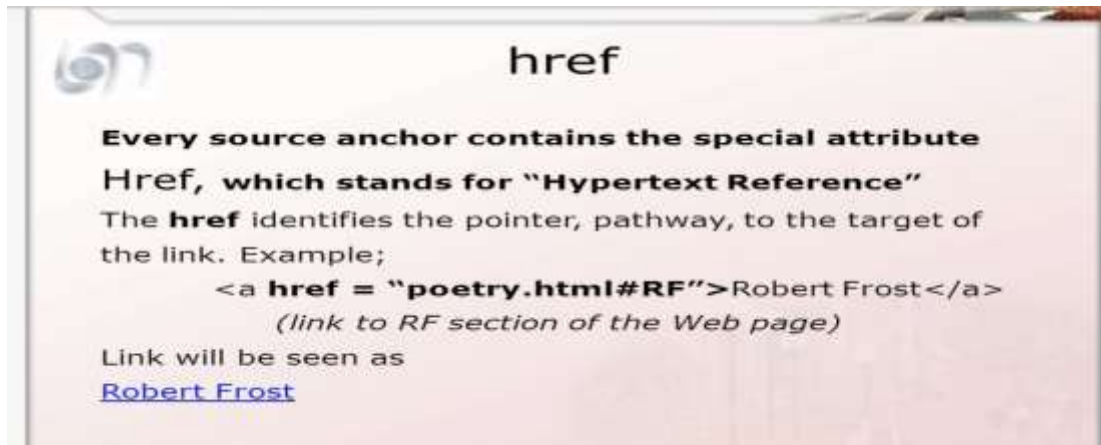

How To Repair

Add text to the `a` element or the `title` attribute of the `a` element or, if an image is used within the anchor, add Alt text to the image.

Steps To Check

Procedure

1. View the link text for each source `a` (anchor) element.
2. Note: A source `a` (anchor) element must contain an `href` attribute.
3. Note: The link text may be contained in the body text of the `a` (anchor) element or the Alt text of an image used as a link.

Monsido Overview!
